Task 1

Det skal siges, at jeg har vedhæftet en .txt fil, så du lettere kan afprøve koden som er skrevet. Det der står i dokumentet er til det visuelle.

a)

Vi har

```
1 vtable = [a → v, b → w];
2
3 while (b != 0) && (a/b != 0)
4     if b < a then {a := a - b}
5                 else {b := b - a}
```

Hvor intermediate koden er

```
1 t_0 = v
2 t_1 = w
3 LABEL LoopStart
4 IF t_1 != 0 then NEXT0 else END (Brug rigtig syntax i tex filen !=)
5 LABEL NEXT0
6 t_2 = t_0 mod t_1
7 IF t_2 != 0 then NEXT1 else END
8 LABEL NEXT1
9 t_3 = t_1 - t_0
10 IF t_3 < 0 then NEXT2 else NEXT3
11 LABEL NEXT2
12 t_0 = t_0 - t_1
13 GOTO LoopStart
14 LABEL NEXT3
15 t_1 = t_1 - t_0
16 GOTO LoopStart
17 LABEL END
```

og MIPS koden vil være

```
1 .data
2     a: .word 8
3     b: .word 33
4 .text
5 main:
6 lw $t0, a           \# load 8
7 lw $t1, b           \# load 33

9 beq $t1, $0, END     \# Checking if t1 == 0
10 div $t0, $t1         \# dividing to get modulus
11 mfhi $t2             \# Getting the remainder, moving to $t2
12 beq $t2, $0, END     \# checking if t2 == 0
13 sub $t3, $t1, $t0    \# t3 = t1 - t0
14 bgez $t3, ELSE       \# t3 >= 0
15 sub $t0, $t0, $t1    \# first then statement a = a - b
16 j LoopStart          \# jumping to loopstart
17 ELSE:                \# Now else statement
18 sub $t1, $t1, $t0    \# b = b - a
19 j LoopStart
20 END:
21                     \# tinyurl.com/neve79o
22 li $v0, 1            \# printer udregnet variable ud.
23 add $a0, $t0, $zero

27 li $a0, 10
28 syscall
29
30 li $v0, 1
31 add $a0, $t1, $zero
32 syscall
```

b)

```
1 Li t0, x
2 Li t1, y
3 Li t2, 1
4 Slt t3, t1, t0
5 Slt t4, t3, t2
```

15  b := b mod ai
16  IF b = z THEN end ELSE start

og dette vil være med 2 registre
